DETAILED ACTION

Claim Objections

1. Claims 13-19 are objected to because of the following informalities and/or defect:

In claims 13 and 14, the terms of "the temperature" should read as: -the predetermined temperature--; and, the terms of "the chamber" should read as: --the reaction chamber--, given that any reaction chamber can be regarded as a portion of a chamber of a depositing system.

In claims 13 and 14, the term of "the dehydrogenation treatment" lacks a sufficient antecedent basis in the claims. And also, they each fail to clarify the relationship between the term of such term and the term of "dehydrogenation treatment" recited in the phrase of "to carry out dehydrogenation treatment".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 19 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 19 recites the limitation "the heater chamber". There is insufficient antecedent basis for this limitation in the claim. In addition, it is not clear which of the two chambers the term of "the chamber" refers to.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 13-19 are rejected on the ground of nonstatutory double patenting over claims 1-9 of U. S. Patent No. 6,099,918, since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a method of preparing a poly-crystalline silicon film comprising: depositing an amorphous silicon film on a substrate by a plasma chemical vapor deposition process to be carried out in a reaction chamber, the depositing step being carried out while a heater heats the substrate at a predetermined temperature; setting the pressure of the chamber higher than the pressure of the chamber during

Art Unit: 2811

the depositing step and leaving the substrate in the chamber to carry out dehydrogenation treatment of the amorphous silicon film; and, poly-crystallizing the amorphous silicon film after the dehydrogenation treatment, wherein the resulting poly-crystalline silicon film can naturally be used to form an active semiconductor layer in a thin film transistor.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
